

FINAL PROJECT DAW 2022/2023

Base functionality/features (50%):

- REST API server and client sides
- Use of a database at the server side (complexity similar to contacts in Lab8)
- Manage endpoints to create, read, update and delete database records
- Use of adequate layout and CSS features

Extra (50%):

- Expand the base functionality with extra functionality/feature of your choice
- Make a significant change/improvement on base functionality of your choice
- Two extras/changes

Brief report (max 5 pages) must include description of:

- The application being created
- Functionality and requirements at client and server sides
- *Layout*
- Project set up

Each block of code must be commented!

Note: These are the requirements for your project to be evaluated in the final exam, as questions will be asked about these issues...so I need to understand what you are doing.
